An exterior view of the Great Room.

Project Scope:

LAN is the Architect and Engineer of Record for the great room addition at Heritage Manor East. LAN has worked with the staff at Christian Health Care Center to ensure the functional arrangement of rooms will accommodate the staff and residents. The great room will incorporate a large, open dining space with clerestory windows and a “rocking chair” front porch so residents can enjoy the fresh air and views within a semi-enclosed area. The aesthetic incorporates cultured stone and wood clapboard siding to diminish the institutional character of the building.

LAN submitted drawings to the Department of Community Affairs and designed the addition in full compliance with all governing building codes. This project was completed in August 2008.
